

20.09.2017 5 PM INAUGURAL LECTURE

PD Dr. med. Daniel Haschtmann

„Posttraumatic Disc Degeneration: Myth or Reality?“

Until now, the question whether spine trauma in the specific case is associated with damage of the intervertebral disc that ultimately leads to organ degeneration, remains controversial. There are conflicting data in experimental as well as in clinical studies. The inaugural lecture aims to give an overview of the current literature and the basic science research carried out in this field.
